What is TISAX®?

TISAX® - Trusted Information Security Assessment Exchange
On the basis of the international standard ISO/IEC 27001, TISAX® is a common assessment and exchange mechanism for evaluating supplier's information security capabilities. Automotive suppliers must implement and maintain an Information Security Management System (ISMS), afterwards pass the corresponding level of TISAX audit in order to be further contracted by an OEM and/or enter the German automotive market.

Collaborations between VW and suppliers require the exchange of data and info.

VW provides SimplIX or CVS/KVS access to securely exchange data and info with VW.

In order to authorize this data exchange, VW requires the vendor to have a valid TISAX® label as a prerequisite.

From traditional parts suppliers to technology R&D, ICT service providers, to surrounding industries and supporting service providers, as long as your company has business relationships and data interaction with German OEMs, you will have to pass the corresponding level of TISAX® audit.

Who needs TISAX®?

How to get TISAX®?

Fit4TISAX® Consulting

To ensure compliance with the defined information security requirements in accordance with TISAX®

1. TISAX® certification has 1-3 levels. Before auditing, suppliers need to communicate with OEMs to confirm the certification level, audit scope and assessment objective that needs to be reached.
2. TISAX® is an audit and evaluation mechanism based on capability maturity. The final score for TISAX® is calculated based on the scores of each audit item.
3. The entire TISAX® certification process generally takes 3-6 months. In order to ensure business continuity, it is recommended to start TISAX® certification preparation as early as possible.
4. Information Security Consulting and TISAX® Audit services cannot be provided by same company.

WHY T-Systems China & O-S?

TISAX® consultation & audit assistance by local consultants **01**
